

All Saints Cosmedical Clinic

to requests from the doctors who trialed it the system was extended in its applications. It enables precise placement and control of volume of product used, while causing less discomfort, swelling and redness and is operated with a foot pedal.

Synergistic combination

Anteis is providing added value to its Esthélis dermal fillers by adding glycerol to the hyaluronic acid-based formulation. Esthélis with glycerol is now available to Mondeal Aesthetics customers in New Zealand.

Like hyaluronic acid, glycerol occurs naturally in healthy skin and fulfils multiple roles in promoting skin functionality, significantly contributing to the quality of the complexion. It is a free radical scavenger that helps promote cell renewal as well as maintaining the skin's protective mantle. Most importantly, it works synergistically with hyaluronic acid to retain moisture, creating visible improvement to the appearance of the skin. *Contact: Mondeal Aesthetics 1800 633 830 or visit www.lookyounger.com.au*

Hypodermic Pen Wins Award

The automated hypodermic pen by Anteis for injecting dermal gels has garnered the company's aesthetic division an award for improving wellbeing through the application of innovative technology.

The 2009 Gusi Peace Prize, conferred by the non-profit Gusi Peace Foundation, was awarded to Anteis - Aesthetic Division Managing Director Silvia Scherer, with particular reference to the Anteis

Injecting System. The technology was initially developed to deliver the Anteis mesotherapy skin rehydrating treatment with Mesolis+, a gel composed of hyaluronic acid and glycerol, but in response

Device Technologies Expand Surgical Instrument Portfolio

Device Technologies are now the distributor of the V Mueller range of surgical instruments in Australia and New Zealand. The V Mueller line provides an extensive range of surgical instruments that supplements the Snowden Pencer line of specialty plastic surgery products which Device Technologies has distributed for over 10 years. Both the Snowden Pencer and V Mueller names are renowned world-wide for quality instrumentation and with thousands of surgical instrument patterns to choose from, the product portfolio is one of the largest on the market.

For over 50 years, Snowden-Pencer instruments have offered exceptional levels of performance and longevity. The first instrument company to introduce the tungsten carbide insert, Snowden Pencer continue to be a leader in advancing specialty instrument design in collaboration with leading surgeons around the world.

In addition V. Mueller has been a leading developer, manufacturer and provider of surgical instruments and services for more than 110 years. The V Mueller range of instruments are crafted and finished with patented technologies to ensure the highest level of quality. V

Mueller surgical instrumentation offers an expansive range of general surgery instruments across most surgical specialties. Contact:
